Abstract: This Paper presents a new meme token SharkToshi "Satoshi's Version of SharkTank" A very simple idea how would Satoshi Nakamoto raise funds to develop a robust blockchain. Nowadays crypto industry is exponentially growing by introducing new ideas to public and transferring power to communities. In 2013 a cryptocurrency Doge created by two software engineers, who decided to create a payment system as a "joke" making fun of the wild speculation in crypto industry at that time. In 2020 a meme revolution came into existence when a new token Shiba Inu was introduced to crypto industry. Nowadays meme token is a trend in crypto industry and we are introducing you "SharkToshi" A community driven blockchain version of SharkTank with fair distribution and availability for all crypto communities. In future based on SharkToshi progress a blockchain will be introduced on the technical basis of Solana Hybrid Proof of History (PoH) - a Proof for verifying orders and History between events alongside with consensus algorithm Proof of Stake (PoS).

Introduction: Blockchain is a shared, immutable ledger that facilitates the process of recording transactions and tracking assets in a business network. An asset can be tangible (a house, car, cash, land) or intangible (intellectual property, patents, copyrights, branding NFT's etc.). Virtually anything of value can be tracked and traded on a blockchain network, reducing risk and cutting costs for all involved. BlockChains are typically managed by a peer-to-peer network for use as a publicly distributed ledger, where nodes collectively adhere to a protocol to communicate and validate new blocks. Blockchains are considered secure by design and exemplify a distributed computing system.

SharkToshi: As the name sounds Satoshi's Version of SharkTank "SharkToshi" is a first meme token on TomoChain network to honor Satoshi Nakamoto for incepting the great idea of peer to peer transactions to decentralize the economy. Shark Token is listed on [LuaSwap](#) DeX. This token is the first of its kind on TomoChain and LuaSwap purely run by its community. We only have one contract address on Tomochain [0x8865280c31B8CBC7b96cE48Ad52C122E6D82806a](#) Nowadays it's easy to create a token on any chain so beware of fake contracts. We do not tax our buyers and sellers only LP fee of 0.4% will be charged for each buy and sell keeping no restriction on any buyer and seller. In future based on the progress of this meme project a blockchain will be build on the technical basis of Solana Hybrid Proof of History (PoH) - a Proof for verifying orders and History between events alongside with consensus algorithm Proof of Stake (PoS).

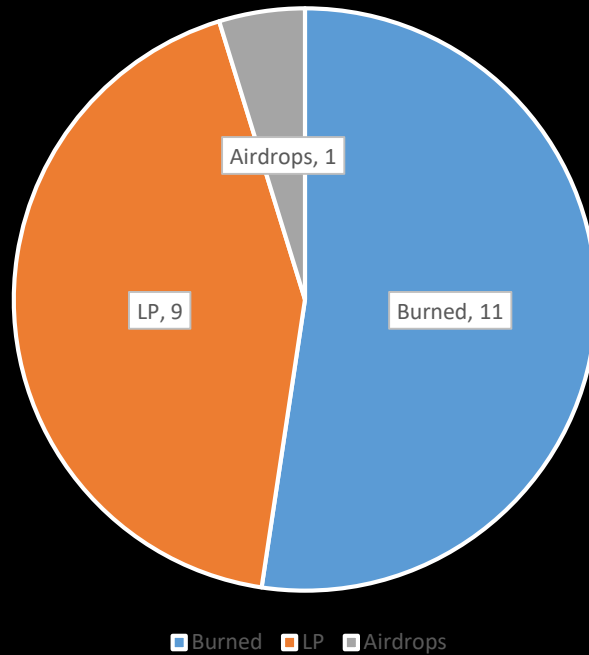

Why TomoChain: TomoChain is an innovative solution to the scalability problem with the Ethereum blockchain, and other current blockchain platforms. TomoChain relies on a system of 150 Masternodes with **Proof of Stake Voting (POSV) consensus that can support near-zero fee**, and 2-second transaction confirmation time. Security, stability and chain finality are guaranteed via novel techniques such as double validation, staking via smart-contracts and "true" randomization processes. TomoChain supports all EVM-compatible smart-

contracts, protocols, and atomic cross-chain token transfers. New scaling techniques such as sharding, EVM parallelisation, private-chain generation, hardware integration will be continuously researched and incorporated into TomoChain's Masternode architecture which will be an ideal scalable smart-contract public blockchain for decentralized apps, token issuances and token integration for small and big businesses.

LuaSwap: LuaSwap is the new swap protocol inspired by the previous AMM-based swap protocols such as Uniswap and SushiSwap. However, LuaSwap's redesigned tokeneconomics and operation strategy addresses the short-comings of other swap systems. At the core, LuaSwap delivers a community-governed, multichain protocol via the LUA token. The focus is to support smaller pools of emerging tokens instead of fighting for liquidity within the top token pools. LuaSwap is a Multi-Chain liquidity exchange protocol with fee structure 0.4% for each Swap out of which 0.35% is added to liquidity providers.

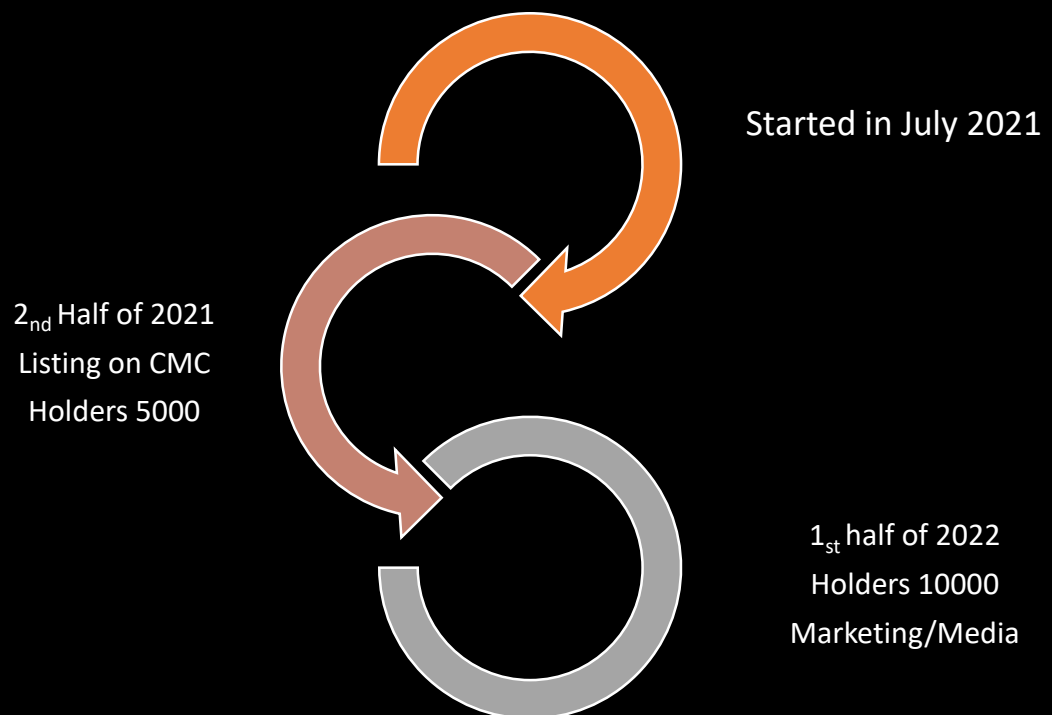

How To Buy Shark Tokens: Download MetaMask or TrustWallet (From the official Source). Connect the wallet with the TomoChain Network and transfer some Tomo Coins to the wallet and connect the wallet with the LuaSwap Dex and enter the SharkToshi Contract address and Swap the Tomo for Shark Tokens.

TokoNomics: A total of one time fixed 21 Billion Tokens have been minted during the contract Deployment ([Contract Code](#)). No ICO or Funds were Raised For the project. The detailed Information of tokonomics is explained below in the graphical representation. Initially the tokens were Airdropped to Tomo and Lua holders with some restrictions and now the tokens will be airdropped via CoinMarketCap Company after the listing of Sharktoshi token on CMC.

A total of 11 Billions tokens burned and 9 Billion in LuaSwap LP holdings and 1B for Airdrops and Marketing.

Road Map:

2nd half 2022
Website Update

1st half of 2023
Blockchain dev @ 50M Cap
Partnership with BC developers

2nd Half of 2023
Mainnet launch

White paper will be updated if needed by the consent of community but it won't affect the tokonomics of this project.

Note: The information provided on this White paper does not constitute investment advice, financial advice, trading advice, or any other sort of advice and you should not treat any of the papers content as such. Our team does not recommend that SharkToshi should be bought, sold, or held by you. Do conduct your own due diligence and consult your financial advisor before making any investment decisions.
